

TARGETS IN HETEROCYCLIC SYSTEMS

Chemistry and Properties

Volume 7 (2003)

Table of Contents

Regio- and stereoselective addition reactions of carbon nucleophiles to epoxides

Paolo Crotti, Valeria Di Bussolo, Franco Macchia and Mauro Pineschi

1. Introduction
 2. Enantioselective addition of dialkylzinc reagents to allylic epoxides
 - 2.1. Copper-catalyzed kinetic resolution of allylic epoxides with dialkylzinc reagents
 - 2.2. Copper-catalyzed enantioselective desymmetrization of symmetrical allylic epoxides
 - 2.3. Copper-catalyzed enantioselective desymmetrization of symmetrical allylic 1,4-epoxides
 - 2.4. Regiodivergent kinetic resolution of allylic epoxides
 3. Addition reaction of lithium enolates of simple ketones to 1,2-epoxides. A new reaction
 - 3.1. Li^+ - and Y^{+3} -promoted addition of lithium enolates of ketones to epoxides. Synthesis of γ -hydroxy ketones
 - 3.2. Sc^{+3} -promoted addition of lithium enolates of ketones to epoxides. Diastereoselectivity of the reaction
 - 3.3. Intramolecular version of the addition reaction. Cyclization of epoxy ketones
 - 3.4. Synthesis of enantiomerically pure γ -hydroxy ketones
 - 3.5. Enantioselective addition of lithium enolate of acetophenone to cycloalkene oxides
 - 3.6. A recent new protocol for the addition of lithium enolate of ketones to 1,2-epoxides
 4. Conclusions
- Acknowledgements
References and Notes

Recent developments in the chemistry of isoxazol-5-ones

Egle Maria Beccalli, Donato Pocar and Caterina Zoni

1. Introduction
 2. Properties of isoxazol-5-ones
 3. Preparation of isoxazol-5-ones
 - 3.1. Synthetic approaches to substituted isoxazol-5-ones
 - 3.2. Isoxazol-5-ones by intramolecular cyclization
 - 3.3. Synthetic approaches to 4-alkylideneisoxazol-5-ones
 4. Reactions of isoxazol-5-ones
 - 4.1. *N*-, *O*- and *C*-alkylation and acylation of isoxazol-5-ones
 - 4.2. Halogenation reactions of isoxazol-5-ones
 - 4.3. Reaction of isoxazol-5-ones with electrophilic reagents
 - 4.4. Vilsmeier-Haack reaction of isoxazol-5-ones
 - 4.5. 4-Nitroisoxazol-5-ones
 - 4.6. Thermolysis and photolysis of isoxazol-5-ones
 - 4.7. Michael additions of ylides to arylmethyleneisoxazol-5-ones
 - 4.8. Reduction of arylmethyleneisoxazol-5-ones
 - 4.9. Alkynes from isoxazol-5-ones
 - 4.10. Cycloaddition reactions
 5. Heterocycles from isoxazol-5-ones
 6. Pharmaceutical studies on isoxazol-5-ones
- References

Application of microwave irradiation, solid supports and catalysts in environmentally benign heterocyclic chemistry

José Ramón Carrillo, Ángel Díaz-Ortiz, Antonio de la Hoz, Andrés Moreno, María Victoria Gómez, Pilar Prieto, Ana Sánchez-Migallón and Ester Vázquez

1. Introduction
 2. Microwave activation in environmentally friendly heterocyclic chemistry
 - 2.1. Synthesis of coumarin derivatives
 - 2.1.1. Synthesis of dihydrocoumarin and coumarin derivatives. Modification of the Pechmann reaction
 - 2.1.2. Pechmann reaction
 - 2.2. Tandem Diels–Alder aromatization reaction of furans
 - 2.2.1. Diels–Alder reaction of furans
 - 2.2.2. Synthesis of benzene derivatives by ring-opening of Diels–Alder cycloadducts
 - 2.3. Preparation of α - and β -substituted alanine derivatives
 - 2.4. Synthesis of 1,3,5-triazines
 - 2.5. Synthesis of quinoxaline-2,3-dione: a synthetic model for radiolabeled compounds
 3. Conclusions
- Acknowledgements
References

Intramolecular palladium-catalysed annulations: advances in azapolycyclic indole synthesis

Elisabetta Rossi and Giorgio Abbiati

1. Introduction
 2. a-Azaannulated polycyclic indoles by intramolecular palladium-catalysed C-N bond formation
 3. b-Azaannulated polycyclic indoles by intramolecular palladium-catalysed C-C bond formation
 4. b-Azaannulated polycyclic indoles by intramolecular palladium-catalysed C-N bond formation

Hetero Diels-Alder approach to oxathiins

Stefano Menichetti and Cristina Nativi

1. Introduction
 2. Synthesis of oxathiins by classical methods
 - 2.1. Oxathiins from acyclic precursors
 - 2.2. Oxathiins from cyclic precursors
 - 2.3. Synthesis of benzoxathiins
 3. Diels-Alder approach to oxathiins
 - 3.1. Early results
 - 3.2. α, α' -Dioxothiones as electron-poor dienes
 - 3.3. *ortho*-Thioquinones as electron-poor dienes
 - 3.4. Glycals as dienophiles
 4. Reactivity of 1,4-oxathiins
 - 4.1. Ring opening
 - 4.2. Oxidation and reduction
 - 4.3. Glyco-condensed oxathiins
 5. Applications of 1,4-oxathiins
 6. Conclusions
- Acknowledgements
References

Nucleophilic additions to nitrones: an alternative gateway to isoxazolidines, pyrrolidines and related compounds

Pedro Merino

1. Introduction
 2. Synthesis of isoxazolidines and related compounds
 3. Synthesis of pyrrolidines and related compounds
 4. Conclusions
- Acknowledgements
References

Paternò-Büchi reaction on furan: regio- and stereochemistry

Maurizio D'Auria

1. Introduction
 2. The Paternò-Büchi reaction on furan derivatives
 3. Approaches to the explanation of regio- and stereoselectivity
 - 3.1. Greisbeck rule
 - 3.2. Scharf rule
 4. Asymmetric reactions
 5. An explanation of diastereoselectivity
 6. Reactions in zeolites
 7. Diastereoselectivity in the reaction with furylmethanol derivatives (Adam rule)

Mass spectrometry of simple indoles part 1: electron ionisation, photo-ionisation and electron capture ionisation

David Bongiorno, Lorenzo Camarda, Leopoldo Ceraulo and Mirella Ferrugia

1. Introduction
 2. Electron ionisation
 - 2.1. Indole
 - 2.2. Alkylindoles
 - 2.3. Indoleamines and tryptamines
 - 2.4. Tryptophans
 - 2.5. Arylindoles
 - 2.6. Methoxyindoles and hydroxyindoles
 - 2.7. Variously substituted indoles
 3. Photo-ionisation
 - 3.1. Indole and methylindoles
 4. Electron capture ionisation
 - 4.1. Tryptamine derivatives
 - 4.2. 5-Methoxy-3-indole acetic acid derivatives
 5. Conclusions
- Acknowledgements
- References

Synthetic use of 2H-azirines in preparative organic chemistry

Francisco Palacios, Ana María Ochoa de Retana, Eduardo Martínez de Marigorta and Jesús Manuel de los Santos

1. Introduction
2. Synthetic application of 2H-azirines to the preparation of nitrogen-containing derivatives
 - 2.1. Synthesis of acyclic compounds
 - 2.1.1. Amines
 - 2.1.2. Imine and enamine derivatives
 - 2.1.2.1. Imines
 - 2.1.2.2. Enamines
 - 2.1.2.3. Azadienes
 - 2.1.3. Amino acids and related amino phosphorus derivatives
 - 2.1.4. Peptides and related compounds
 - 2.1.5. Other acyclic compounds
 - 2.2. Synthesis of heterocyclic compounds
 - 2.2.1. Three-membered rings
 - 2.2.1.1. Azirines
 - 2.2.1.2. Aziridines
 - 2.2.2. Four-membered rings

- 2.2.3. Five-membered rings
- 2.2.4. Six-membered rings
- 2.2.5. Larger heterocycles

3. Conclusions

Acknowledgements

Gas-phase ion chemistry of simple 1,4-benzodiazepines. Part I

Gianluca Giorgi

1. Introduction

2. Gas-phase ion chemistry of 1,4-benzodiazepines

- 2.1. 5-Phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one derivatives
- 2.2. 3-Alkyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-ones
- 2.3. 3-Hydroxy-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one derivatives
- 2.4. 5-Phenyl-1,3-dihydro-2*H*-1,4-benzodiazepine-N(4)-oxide derivatives
- 2.5. 3,4-Dihydro-1*H*-1,4-benzodiazepine-2,5-diones
- 2.6. Amino derivatives of 2,3-dihydro-1*H*-1,4-benzodiazepines
- 2.7. 5-Phenyl-3*H*-1,4-benzodiazepine derivatives

3. Gas-phase ion-molecule reactions of 1,4-benzodiazepines

4. Conclusion

Synthesis and chemical properties of polynitro- and halonitro-dihydrothiophene 1,1-dioxides

Irina E. Efremova and Valentina M. Berestovitskaya

1. Introduction

2. Synthesis of polynitro- and halonitro-dihydrothiophene 1,1-dioxides

- 2.1. Synthesis of 2,2,4-trinitro-, 2,4-dinitro- and 2-halo-2,4-dinitro-2,5-dihydrothiophene 1,1-dioxides
- 2.2. Synthesis of dinitrobenzylidenedihydrothiophene 1,1-dioxides [2-(aryl-nitro-methylene)-3-methyl-4-nitro-2,5-dihydrothiophene 1,1-dioxides]
- 2.3. Synthesis of halonitrodihydrothiophene 1,1-dioxides

3. Structure of polynitro- and halonitro-dihydrothiophene 1,1-dioxides

- 3.1. 2,2,4-Trinitro-, 2,4-dinitro- and 2-halo-2,4-dinitro-2,5-dihydrothiophene 1,1-dioxides
- 3.2. Dinitrobenzylidenedihydrothiophene 1,1-dioxides [2-(aryl-nitro-methylene)-3-methyl-4-nitro-2,5-dihydrothiophene 1,1-dioxides]
- 3.3. Halonitrodihydrothiophene 1,1-dioxides

4. Chemical properties of polynitrodihydrothiophene 1,1-dioxides

- 4.1. Peculiarities in the reactivity of 2,2,4-trinitro- and 2-halo-2,4-dinitro-2,5-dihydrothiophene 1,1-dioxides
- 4.2. Peculiarities in the properties of dinitrobenzylidenedihydrothiophene 1,1-dioxides

5. Halo- and prototropic rearrangements of bromonitrodihydrothiophene 1,1-dioxides
